

# MAINE

1 Assigns to schools annual ratings that are clear and intuitive

**MEDIUM**

2 Encourages schools to focus on all students, not just low performers

**MEDIUM**

3 Measures all schools fairly, including those with high rates of poverty

**MEDIUM**

ESSA grants states more authority over their school accountability systems than did NCLB. Three of the most important improvements states can make are to: (1) assign to schools annual ratings that are clear and intuitive for parents, educators, and the public; (2) encourage schools to focus on all students, not just their low performers; and (3) measure and judge all schools fairly, including those with high rates of poverty.

To determine whether Maine's proposed ESSA accountability system accomplishes these three objectives, this analysis evaluates its state plan, as submitted to the U.S. Department of Education on May 4, 2017,<sup>47</sup> as explained below.

1

## Are the labels or ratings for schools clear and intuitive for parents, educators, and the public?

Maine's plan earns a **medium** on this point because it proposes to use text labels for schools' annual ratings. Although the proposed labels are easy to understand, in isolation each label fails to communicate how much better or worse a given school could do (it's not instantly clear, for example, whether "below expectations" is the worst possible rating; in Maine, it's second worst after "requires review for support"). Thus this model fails to convey immediately to all observers how well a given school is performing.

2

## Does the rating system encourage schools to focus on all students?

There are two primary ways for state accountability systems to encourage schools to focus on all students: (1) use a performance index or scale scores in place of proficiency rates when measuring achievement and (2) measure the growth of all students. Maine receives a **medium** because—despite measuring achievement proficiency rates, which might encourage schools to focus on pupils near the proficiency cutoff—a measure of growth for all students constitutes 38 percent of schools' annual ratings, which should at least partially encourage schools to heed the educational needs of every child.

3

## Is the rating system fair to all schools, including those with high rates of poverty?

Maine gets a **medium** here because student-level growth will constitute 38 percent of schools' annual ratings. Growth measures gauge changes in pupil achievement over time, independent of prior achievement, and are therefore less correlated with poverty—thus affording high-poverty schools the opportunity to earn positive ratings.
