

OKLAHOMA

1 Assigns to schools annual ratings that are clear and intuitive

STRONG

2 Encourages schools to focus on all students, not just low performers

STRONG

3 Measures all schools fairly, including those with high rates of poverty

STRONG

ESSA grants states more authority over their school accountability systems than did NCLB. Three of the most important improvements states can make are to: (1) assign to schools annual ratings that are clear and intuitive for parents, educators, and the public; (2) encourage schools to focus on all students, not just their low performers; and (3) measure and judge all schools fairly, including those with high rates of poverty.

To determine whether Oklahoma's proposed ESSA accountability system accomplishes these three objectives, this analysis evaluates its state plan, as submitted to the U.S. Department of Education on September 18, 2017,⁶⁶ as explained below.

1

Are the labels or ratings for schools clear and intuitive for parents, educators, and the public?

Oklahoma's plan is **strong** on this point because it proposes to use an A–F grading system for schools' annual ratings. This model immediately conveys to all observers how well a given school is performing.

2

Does the rating system encourage schools to focus on all students?

There are two primary ways for state accountability systems to encourage schools to focus on all students: (1) use a performance index or scale scores in place of proficiency rates when measuring achievement and (2) measure the growth of all students. Oklahoma receives a **strong** rating because those two components constitute 72 percent of schools' annual ratings. Scale scores count for 39 percent, which encourages schools to look beyond those pupils who are near the cutoff for proficiency. And a measure of growth for all students constitutes another 33 percent of schools' summative ratings, which should also lead schools to heed the educational needs of every child.

3

Is the rating system fair to all schools, including those with high rates of poverty?

Oklahoma gets a **strong** here because academic growth will constitute 72 percent of schools' annual ratings—39 percent for a measure that tracks the progress of student groups and 33 percent for a measure of growth for all children.⁶⁷ Growth measures gauge changes in pupil achievement over time, independent of prior achievement, and are therefore less correlated with poverty—allowing high-poverty schools the opportunity to earn positive ratings.
