ESSA grants states more authority over their school accountability systems than did NCLB. Three of the most important improvements states can make are to: (1) assign to schools annual ratings that are clear and intuitive for parents, educators, and the public; (2) encourage schools to focus on all students, not just their low performers; and (3) measure and judge all schools fairly, including those with high rates of poverty.

To determine whether Ohio’s proposed ESSA accountability system accomplishes these three objectives, this analysis evaluates its state plan, as submitted to the U.S. Department of Education on September 18, 2017, as explained below.

1. Are the labels or ratings for schools clear and intuitive for parents, educators, and the public?

Ohio’s plan is strong on this point because it proposes to use an A–F grading system for schools’ annual ratings. This model immediately conveys to all observers how well a given school is performing.

2. Does the rating system encourage schools to focus on all students?

There are two primary ways for state accountability systems to encourage schools to focus on all students: (1) use a performance index or scale scores in place of proficiency rates when measuring achievement and (2) measure the growth of all students. Ohio receives a medium rating because, despite including those two components, they only constitute 36 percent of schools’ annual ratings. A performance index, which encourages schools to look beyond those pupils who are near the cutoff for proficiency, counts for just 21 percent. And a measure of growth for all students constitutes another 15 percent of schools’ annual ratings, which should at least partially encourage schools to heed the educational needs of every child.

3. Is the rating system fair to all schools, including those with high rates of poverty?

Ohio gets a strong here because academic growth will constitute 50 percent of schools’ annual ratings—comprising a mix of growth for all students, gifted growth, growth of students with disabilities, growth of low-achieving students, and progress in K–3 literacy. Growth measures gauge changes in pupil achievement over time, independent of prior achievement, and are therefore less correlated with poverty—allowing high-poverty schools the opportunity to earn positive ratings.
