ESSA grants states more authority over their school accountability systems than did NCLB. Three of the most important improvements states can make are to: (1) assign to schools annual ratings that are clear and intuitive for parents, educators, and the public; (2) encourage schools to focus on all students, not just their low performers; and (3) measure and judge all schools fairly, including those with high rates of poverty.

To determine whether West Virginia’s proposed ESSA accountability system accomplishes these three objectives, this analysis evaluates its state plan, as submitted to the U.S. Department of Education on September 21, 2017, as explained below.

**Are the labels or ratings for schools clear and intuitive for parents, educators, and the public?**

West Virginia’s plan earns a medium on this point because it proposes to use text labels as schools’ annual ratings. Although the proposed labels are easy to understand, in isolation each one fails to communicate how much better or worse a given school could do (it’s not instantly clear to a parent, for example, whether “distinguished” is West Virginia’s best possible rating). This model fails to convey immediately to all observers how well a given school is performing.

**Does the rating system encourage schools to focus on all students?**

There are two primary ways for state accountability systems to encourage schools to focus on all students: (1) use a performance index or scale scores in place of proficiency rates when measuring achievement and (2) measure the growth of all students. West Virginia receives a strong rating because those two components constitute 56 percent of schools’ annual ratings. A performance index counts for 28 percent, which encourages schools to look beyond those pupils who are near the cutoff for proficiency. And a measure of growth for all students constitutes another 28 percent of schools’ summative ratings, which should also lead schools to heed the educational needs of every child.

**Is the rating system fair to all schools, including those with high rates of poverty?**

West Virginia gets a weak here because academic growth will constitute just 28 percent of schools’ annual ratings. Growth measures gauge changes in pupil achievement over time, independent of prior achievement, and are therefore less correlated with poverty—thus affording high-poverty schools the opportunity to earn positive ratings. West Virginia’s approach will unfairly disadvantage high-poverty schools.
